## SDG&E Electric Utility Properties:

SDG&E operates nine oil and gas-fueled generating units, with net capability of 1,641 MW, located in San Diego County. The four South Bay units (690 MW), located in the City of Chula Vista, went into operation between 1960 and 1971; the five Encina units (951 MW), located in the City of Carlsbad, went into operation between 1954 and 1978. SDG&E owns 100% of all of these units except Encina 5 (330 MW), which SDG&E sold and leased back in 1978, with a lease term through 2004 and renewal options for up to 15 additional years. SDG&E owns 19 gas-fired combustion turbines with net capability of 332 MW, which were placed in service from 1966 to 1979; these turbines are located at various sites in San Diego County and are used only for emergency and peak demand. SDG&E owns 20% of the three nuclear units at San Onofre . Nuclear Generating Station ("SONGS"), located in San Diego County, south of San Clemente at the Camp Pendleton United States Marine Base. SONGS is primarily owned and operated by Southern California Edison Company ("Edison"). SONGS 1 has been permanently shut down. SDG&E's share of SONGS 2 and 3 amounts to an aggregate of 430 MW. SDG&E owns another 230-MW diesel and gas-fueled plant in San Diego County, which is in storage and is not expected to return to service.

SDG&E's transmission facilities consist of transmission lines and transmission substations operating at various voltages from 69 kV (69,000 volts) upwards to 500 kV. SDG&E owns the transmission facilities located in the area in which it serves (San Diego County and an adjacent portion of Orange County), as well as all or portions (specified below) of the three segments of the Southwest PowerLink (SWPL), a 500-kV transmission line extending from SDG&E's Miguel Substation in Southern San Diego County to the Palo Verde Nuclear Generating Station west of Phoenix, Arizona, via two intermediary substations at Imperial Valley, California and North Gila, Arizona.

SDG&E's transmission system consists of the following:

- 500 kV: 279.00 circuit-miles (159.0 miles in California, 120.0 miles in Arizona)
- 230 kV: 267.25 circuit-miles (all in California)
- 138 kV: 234.29 circuit-miles (all in California) 69 kV: 843.73 circuit-miles (all in California)

SDG&E is interconnected to various utilities for the purpose of buying and selling electric power and energy, as well as for mutual reliability. SDG&E is interconnected with Edison at the San Onofre 230kV bus. SDG&E's system connects to the Mexico utility Comision Federal de Electricidad via two 230 kV transmission lines, one from Miguel Substation to Tijuana Substation and the other from Imperial Valley Substation to La Rosita Substation (each line owned by SDG&E on the U.S. side of the international border). The Miguel-Imperial Valley segment of the SWPL (100% owned by SDG&E) provides an interconnection to the system of Imperial Irrigation District; the Imperial Valley North Gila segment of the SWPL (85.64% owned by SDG&E) provides an interconnection with Arizona Public Service; and the North Gila-Palo Verde segment of the SWPL (76.22% owned by SDG&E) provides the final leg for accessing power at the Palo Verde 500-kV bus, at which power from various sources can be obtained by SDG&E. All the substations at these interconnections are jointly owned by SDG&E and the respective interconnected utilities.

SDG&E's distribution facilities consist of approximately 8,700 circuit miles of overhead lines and 9,100 circuit miles of underground lines located in San Diego and Orange Counties.

## SDG&E Gas Utility Properties:

SDG&E owns and operates facilities used for the distribution of natural gas to its electric generating units and to retail customers for heat, light and power in San Diego County. SDG&E's natural gas facilities are located in San Diego and Riverside Counties. Gas facilities consist of transmission facilities (compressor stations of 16,900 horsepower in Moreno and of 3,080 horsepower in Rainbow),

approximately 164 miles of high-pressure transmission pipelines, approximately 6,754 miles of high-pressure and low-pressure distribution mains, and approximately 5,591 miles of service lines. All natural gas is delivered to SDG&E under a transportation and storage agreement with Southern California Gas Company through two transmission pipelines and one distribution pipeline owned by Southern California Gas, with a combined capacity of 525 million cubic feet per day.
